

YKK AP India Business: New Aluminum Extrusion Line Installed at Boruka Extrusions Mysuru Factory

—Increasing Production Capacity by 17% to Accelerate Business Expansion in the Rapidly Growing Indian Market—

YKK AP Inc. (Headquarters: Chiyoda-ku, Tokyo; President: Akira Uozu) is pleased to announce that Boruka Extrusions Private Limited (Head Office: Karnataka, India), an affiliated company operating YKK AP’s Indian business, has undertaken the restructuring of its main manufacturing site, the Mysuru Factory. A new aluminum profile extrusion line has been installed, and a commissioning ceremony was held locally on October 8.

India’s construction market continues to expand against a backdrop of sustained economic growth, with demand for high-quality aluminum architectural products increasing year by year. Since joining the YKK AP Group in 2013, Boruka Extrusions has expanded its business along two principal axes: the Profile Business, which manufactures and sells aluminum profiles tailored to customers’ requirements for individual projects, including industrial products and curtain walls (CWs), and the AP Business, which manufactures and sells aluminum window products. Recent years have seen growing sales of high-value-added products, including the aluminum window product “IWIN-S,” and as such, the need to enhance the production system to meet future demand growth has emerged as a key challenge.

In light of these circumstances, and to realize the goal outlined in the 7th Mid-term Management Plan for our India operations, "becoming a high value, single-source systems firm," we will undertake capital investment totaling 620 million Indian rupees to enhance production capacity and improve production efficiency within the factory.

This capital investment aims to further enhance our business competitiveness and cost competitiveness in the Indian market, where demand for construction is increasing in step with economic growth, to improve quality and respond quickly to diversifying customer needs. With the installation of the new extrusion line, the factory’s key manufacturing equipment, annual production capacity for aluminum profiles will increase by approximately 17%, from 12,000 tons to 14,000 tons. Additionally, a new materials warehouse will be constructed to streamline logistics processes within the factory, and upgrades will be made to the casting equipment and powder coating facilities, further enhancing production capacity at the Mysuru Factory.

Bhoruka Extrusions will use this expansion of production capacity as an opportunity to strengthen its Profile Business by expanding target areas and enhancing value-added proposals to customers, aiming for increased sales through its strengths in high-quality management and integrated production systems (material procurement, extrusion, surface treatment, and simple processing). In its AP Business, it will expand the lineup of “IWIN-S,” an aluminum window product with high airtight and watertight performance, drawing on the technology and expertise cultivated over many years by YKK AP. By stepping up the company’s expansion into major metropolitan areas while enhancing its engineering proposal capabilities, this will contribute to improving living environments in India, further strengthening YKK AP’s presence in the Indian and Asian markets.

“IWIN-S”

Overview of the Bhoruka Extrusions Mysuru Factory Restructuring Plan

	Phase 1	Phase 2
Production Equipment	9-inch extrusion line, materials warehouse	Renewal of casting line and powder coating line
Date of Activation	October 2025	Scheduled for FY2026
Aluminum Profile Production Capacity	Mysuru Factory total: 14,000 tons per year	
Capital Investment	620 million Indian rupees
